Benchmarks for Blight In 2006, the U.S. Department of Housing and Urban Development (HUD) began acquiring quarterly extracts of U.S. Postal Service (USPS) data and publishing this data as a possible indicator of blight and vacancy for cities nationwide. In this report, addresses coded as "no-stat" in the HUD data are used as proxies for blight ed housing units in New Orleans because a parcel-by-parcel census of all properties in New Orleans is not available. (HUD data description available at: http://www.huduser.org/portal/datasets/usps.html) No matching rows found	254 views		
NORA Uncommitted property, CE Demolitions, Lien Foreclosures Blight ed structures that have been demolished since the inception of Blight Stat on October 1, 2010. Blight Stat is a public meeting that tracks the City's progress in meeting Mayor Landrieu's stated goal of eliminating 10,000 blight ed New Orleans properties in three years. Scheduled update: Monthly No matching rows found	267 views		
Blight Status Demolitions Blight ed structures that have been demolished since the inception of Blight Stat on October 1, 2010. Blight Stat is a public meeting that tracks the City's progress in meeting Mayor Landrieu's stated goal of eliminating 10,000 blight ed New Orleans properties in three years. Scheduled update: Monthly In February 2014, the City made several changes to the dataset involving data cleaning and de-duplication. This process entailed adding demolition start and completion dates to demolitions, cleaning and verifying the addresses of demolitions, and removing duplicate cases based on their GeoPIN. The data set still includes several cases with duplicated GeoPINs, where multiple units were demolished on the same parcel. No matching rows found	1,874 views		
Blight Status Demolitions - Map Blight ed structures that have been demolished since the inception of Blight Stat on October 1, 2010. Why Open Data

Online government data users

40% of internet users went online for government data or information in the preceding twelve months. These are some of the data sources they looked for.

Pew Research Center's Internet & American Life Project, November 30-December 27, 2009 Tracking Survey. N=2,258 adults 18 and older, including 1,676 internet users. Please see the Methodology section for margin of error calculations.

Use of government data is correlated with positive attitudes towards federal government openness

The proportion (%) within each group who feel that the federal government is more or less open and accountable compared with two years ago.

■ More open & accountable ■ About the same ■ Less open & accountable ■ Don't know/refuse

Not online

Online, not government data user

Government data users

Pew Research Center's Internet & American Life Project, November 30-December 27, 2009 Tracking Survey. N=2,258 adults 18 and older. Margin of error for the total sample is +/-2%. For smaller subgroups, the margin of error may be larger. Please see the Methodology section for details.

Open Data Platforms

Socrata

Socrata is the most popular commercial data platform provider in the United States. Socrata offers a turnkey SaaS cloud-hosted data catalog, paid for on a subscription basis. The Socrata platform includes API abilities and sitewide analytics that track consumption and engagement metrics.

Socrata is used by dozens of municipal governments, including **Baltimore, Austin, Chicago, Seattle**, and **New York City**.

PROS:

- Well-supported and relatively turnkey option
- Lots of experience with municipal government
- Add-on services like a performance management tool

CONS:

- Depending on options, can be more costly
- A more complicated interface

Esri ArcGIS Open Data

ArcGIS Open Data is a hosted web application provided by ESRI that allows any organization using ArcGIS Online to easily open up data stored in that system. Data providers can easily enable open data, specify open data groups, and create and publicize their open data without hosting their own site.

PROS:

- Many governments already have an existing relationship with ESRI.
- Easily integrates with existing systems.

CONS:

- May be best suited for geographic data.
- The offering is currently in beta as of June 2014.

OpenDataCatalog

OpenDataCatalog (ODC) is open source software originally created by Azavea for the city of Philadelphia. The software is available for download on Github and a community of developers and implementers continue to work on improving the software. ODC includes options for data owners to submit data for consideration and for registered public users to nominate a type of data they would like to see openly available to the public. ODC is written using Django, Python and PostgreSQL.

ODC has also been used in **Cincinnati** and **San Diego** for community-launched data catalogs..

PROS:

- Multiple success stories in US, creating a community of support among implementers in different cities.

CONS:

- Moderately complex application environment (Python base)
- Limited commercial support options
- Relatively immature feature set
- Requires styling out of the box
- No repository capabilities
- Requires ongoing support resources internally

Considerations

- * Ease of Use
- * Type of Data
- * Hosted
- * Cost

- * Data organized by themes
- * Each theme has a metric
- * Drill down by choosing a theme
- * Or type a keyword in the search box.
- * Or search all data
- * Data is refreshed on a regular basis

The screenshot displays the DataLA website, the open data portal for the City of Los Angeles. The interface is organized into several sections:

- Header:** Includes the user name "Eric Garcetti", navigation links for "DATA" and "L.A.", and utility links like "View all datasets", "Request a dataset", "Sign Up", and "Sign In".
- Featured Metrics:** A row of five data cards with large numbers and status indicators:
 - Air Quality: Non-Attainment Days: 57 days (needs improvement)
 - Water: Percentage from MWD: 68.6% (measuring)
 - Energy: Renewables Percentage: 21% (on track)
 - Street Pavement Quality: PCI: 62 (on track)
 - Mobility: Daily Vehicle-Miles: 41.37M miles (measuring)
- Search and Navigation:** A search bar labeled "Search Data..." and a category filter set to "A Livable and Sustainable City".
- Thematic Tiles:** Five blue tiles representing different city goals:
 - A Safe City (Public Safety Data)
 - A Livable And Sustainable City (Livability Data)
 - A Prosperous City (Economic Data)
 - A Well Run City (Government Efficiency Data)
 - Developers (Developer Resources)
- Welcome Message:** A paragraph explaining the portal's purpose: "Welcome to DataLA, the open data portal for the City of Los Angeles. Here you will find data to conduct research, develop web, online, and mobile applications, and generally learn more about Los Angeles. This site allows you to subscribe to changes in datasets, request new datasets, and participate in discussions with other users. We look forward to seeing what you do with DataLA."
- Category Page:** The "A Livable and Sustainable City" category page features a large background image of a cityscape and several data tiles:
 - Annual LADWP CO2 emissions:** A large tile with a cityscape background and text explaining CO2 as a greenhouse gas.
 - Air Quality Measurements:** A tile with a sunset background.
 - Solar Incentive Program:** A tile with a modern building and solar panels.
 - Mobility Metrics:** A tile with a bus and a cyclist.
 - Water Use by Zip Code:** A tile with a close-up of water flowing from a faucet.

The screenshot shows the Los Angeles Open Data Catalog website. The header includes the Los Angeles logo and navigation links like 'View all datasets', 'Request a dataset', 'Sign Up', and 'Sign In'. The main content area is titled 'Data Catalog' and features a search bar, filters for 'View Types' (All, Datasets, Charts, Maps, Calendars, Filtered Views, External Datasets, Files and Documents, Forms, APIs) and 'Data Owner' (Aging, Animal Services, Board of Public Works, Building and Safety, Bureau of Contract Administration). A table lists various datasets with columns for Name, Popularity, Type, and RSS. The table includes entries such as 'City Boundaries for Los Angeles County', 'Location of Los Angeles County Metro Bus Stops', 'Los Angeles County Metro Bus Routes', 'Los Angeles County Metro Rail Stations', 'Parcels', 'MAP OF HCIDLA AFFORDABLE HOUSING TRUST FUNDED DEVELOPMENTS (FROM 2003 TO PRESENT)', 'VWSP Area Affordable Housing', 'Building and Safety Temporary Special Event (TSE) Permits', '10M+ New 1 unit', and 'Building and Safety Permit Information'. The footer shows pagination information: 'Showing 10 of 122'.

Name	Popularity	Type	RSS
City Boundaries for Los Angeles County Provided by controllerdata.lacity.org The Los Angeles County Department of Public Works provides the most current shapefiles representing city boundaries within Los Angeles County, and the shapefiles available in this download includes polygons and lines.	100 views	0

Embedding Data

- * The City's Open Data portal provides easy tools to embed data within your site.

Developer Tools

The City's Open Data portal provides a tool kit so developers can get the most out of the data that is available.

Developer Resources

Welcome to the Developer Resources Page! Did you know that every dataset on this site has an API? Get started by diving into the documentation, test drive examples, or browse other open data applications.

Getting Started with SODA

So you want to win that hackathon or build the next hot open data app? Follow the Getting Started guide for App Developers at dev.socrata.com to get yourself started. Learn about finding the API endpoint, building filters and queries, and getting set up with an App Token.

Access Start Guide

Additional API Documentation

Ready to start exploring the libraries and more in-depth examples? Check out the libraries at dev.socrata.com for languages like Java, Ruby, and Scala. Explore the API Docs to learn about the output formats and RESTful verbs. Ready to get dive into examples? Check out the example of building a column chart in D3.

Visit dev.socrata.com

Submit Your App

If you have created an app with the open data on this site, we'd love to know about it! Submit your app here, and we will feature it on the site below. Looking for ideas for an app to build? Check out the library below to see what projects people are working on.

Submit App

How do I access an API?

Find the API Access Endpoint

Under SODA API, you will find the link for the API Endpoint as well as each column id for that dataset.

API Access Endpoint:

<http://opendata.socrata.com>

Column IDs:

State

Location

Find API information through the Export button.

Every dataset, map, chart, and filtered view has an API! Find the API endpoints and column names through the Export button, under SODA API.

A search bar is present. The main content area has a "Welcome" message from Mark Greninger, the Geographic Information Officer, and a list of categories including GIS Applications, Data Theme, Addressing, Administrative Boundaries, Basemaps and Grids, Cadastral, Demographic, Elevation, Environmental, Hazards, Hydro, Imagery, Infrastructure, Political Boundaries, Services, Society, Transportation, Data Source, Assessor, Beaches and Harbors, Chief Executive, and Chief Information Officer. A sidebar on the left lists various data categories and their counts.

Los Angeles County GIS Data Portal
GIS Data for LA County

Welcome to the LA County GIS Data Portal. The LA County GIS Data Portal is the place to search for and download GIS data created, maintained, licensed, and stored by the County of Los Angeles. Please read the [GIS Data Disclaimer](#) before proceeding.

The County's Enterprise GIS Steering Committee has established this site to make **high quality** geographic information simple and easy to find, while providing a forum for feedback, questions, and discussion about particular data. Los Angeles County will make as much GIS data as it can, available for public use (i.e. FREE). In some cases, due to licensing restrictions, privacy concerns, or outside ownership, we are unable to do so. However, we will provide information about all of our data holdings, since there may be ways to access the data if you partner with the County.

Benefits

- * There is a general movement across all levels of government to provide open access to data
 - * Generally opening access to data increases trust in the government
 - * Spawns economic growth through innovative use of the data and the associated applications built for the community
 - * Increases efficiency within the government operations
 - * Breaks down information silos within the organization
